CEU Course Offering
CRYSTAL FUNDAMENTALS

CRYSTAL:

Crystal is a fascinating compound that has inspired designers throughout the ages. With sparkle and charm, crystal enhances the refraction of light and makes spaces feel brighter and architecturally interesting.

This seminar covers the basics of crystal manufacturing, enhancing crystal with special effects, color, and cutting, and then used in lighting designs which are appreciated for their decorative beauty and perfect for application in both residential and commercial interior environments.

LEARNING OBJECTIVES:

- ❖ Participants will learn about the history of crystal including milestones in use.
- ❖ Participants will learn about the different grades of crystal, how crystal is manufactured, and why not all crystal is created equal.
- ❖ Participants will learn about crystal colors, shapes, and added effects, and how each of these components can influence and inspire the design of lighting fixtures.
- ❖ Participants will learn about the interplay of crystal and light and its effect on the mood of interior space.

CEU NUMBER: CEU-101843
DESIGNATION: General
CEU VALUE: 0.2
LEARNING LEVEL: Basic
SUBJECT CODE: 2. Interior Design / 8. Lighting Design
